- ```

```
- What are the key drivers for customer value or business value that this capability addresses, and what specific customer or business outcomes are we trying to achieve?
  - What is the user journey from start to finish for the primary use case, and what are the key stages or steps in the user journey?
  - Where in the user journey are users experiencing frustration, friction, or unhappiness?
  - What moments of delight or value should users experience during their journey?
  - What are the critical pain points that prevent users from achieving their goals?
  - What other systems, data sources, or tools does this capability need to interact with in order to deliver value?
  - What are the key behaviors or integration points that define how these systems support or depend on one another?

#### **\*\*Evidence:\*\***

Business model canvas, Journey maps or other design thinking artifacts, Technical specifications, Product charters, Business cases, Business models, Impact maps, R&D maps, User research, User journey maps, Similar systems, User interviews, Business process documentation, Business stakeholder interviews, Existing system documentation, Business glossaries or dictionaries, Financial statements, Industry literature
